Experience

Cognizant Technology Solutions

Sr. Software Developer - 08/2019 to present

Client - American Express – 01/2020 to present

- Maintaining (including content changes) and making enhancements (including changes in static JavaScript files) on the legacy market applications based on J2EE and AngularJS.
- Implementation of features and enhancements in the newer market applications using internal client framework based on ReactJS and relevant changes in the back-end application based on ExpressJS.
- Worked on implementation of a market application from scratch on a newer and enhanced version of the internal client framework and owning and implementing several post-launch features on the same.
- Worked on the development of a new framework that is being developed using newer libraries and more modern approach to ensure better performance for the applications onboarded on it.
- Worked on developing one market application with the new framework as a POC and making suitable framework level enhancements in parallel.
